Mandatory Language for Monitoring/Reporting Violation

Failure to Submit a Disinfectant Level Quarterly Operating Report (DLQOR)
MONITORING, ROUTINE (DBP), MAJOR/CHLORINE

The FANNIN COMMUNITY water system PWS ID 0880010 has violated the monitoring/reporting requirements set by Texas Commission on Environmental Quality (TCEQ) in Title 30, Texas Administrative Code (30 TAC), Section 290, Subchapter F. Public water systems are required to properly disinfect water before distribution, maintain acceptable disinfection residuals within the distribution system, monitor the disinfectant residual at various locations throughout the distribution system, and report the results of that monitoring to the TCEQ on a quarterly basis.

Results of regular monitoring are an indicator of whether or not your drinking water is safe from microbial contamination.

This/These violation(s) occurred in the monitoring period(s) July 1, 2019 thru September 30, 2019

We are taking the following actions to address this issue:

The Fannin Water System monitored the disinfection residuals within the distribution system as required by TCEQ during the above monitoring period. The disinfection residual levels monitored were in compliance with state regulations, indicating that water is and was safe from microbial contamination. Fannin Water System failed to report the compliance data to TCEQ as required, resulting in this violation. Fannin Water System has since submitted the required report to TCEQ.

Please share this information with all people who drink this water, especially those who may not have received this notice directly (i.e., people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

If you have questions regarding this matter, you may contact Daniel Flores at 210-302-4200.
